

## Tanco Autowrap Technical information

Subject	ir testing
Description	testing infrared receiver and transmitter
Modified	5-9-04
Location	electrical system
Model	pre 98 Tanco Autowrap A models

The control box will have a parameter to enable the remote control, in the operators level you can set one function to 'r' which will enable the remote control and should make the machine work providing that the transmitter is ok.

Difficult to test this, there may be a small 'led' on the faceplate that lights up when a button is pressed but this is no indication that the unit is working or not. Most TV repair shops have a some 'ir' test equipment.

It's possible to test the receiver with an electrical test meter, if a electrical supply is connected to it, there is normally a output voltage from the signal wire, this will change on receiving a signal from the transmitter.

The attached pages describe the procedure for setting the control box.
